PROFILE

Junior penetration tester with hands-on experience across network, web application, Windows/Linux, and Active Directory environments through structured lab-based training and self-directed security testing. Completed PEN-200 (Offensive Security) and regularly practice on Hack The Box and Proving Grounds, focusing on full attack chains including enumeration, exploitation, privilege escalation, and post-exploitation techniques. Built a personal Active Directory lab to simulate enterprise environments and practice domain exploitation, credential attacks, lateral movement, and attack path analysis. Bringing 8 years of experience in regulated healthcare environments requiring accuracy, confidentiality, structured documentation, and problem-solving skills.

CERTIFICATIONS

- CompTIA Security+
- CompTIA Network+
- CompTIA A+
- PEN-200 (Offensive Security Training – completed)

TECHNICAL SKILLS

Penetration testing lifecycle: reconnaissance, enumeration, exploitation, privilege escalation, post-exploitation
Web Application Security: OWASP Top 10, manual testing, Burp Suite
Active Directory Security: domain enumeration, attack path analysis, credential attacks
System Exploitation: Windows & Linux privilege escalation
Post-Exploitation: lateral movement, pivoting, tunnelling
Technical security reporting and documentation

TOOLS & PLATFORMS

Nmap, Gobuster, NetExec, Burp Suite, BloodHound, Metasploit, Evil-WinRM, Hashcat, John the Ripper, Chisel, Ligolo-ng, SSH tunnelling
Kali Linux, Windows, Linux
Hack The Box, Proving Grounds, PEN-200 labs, Hack The Box Academy

PRACTICAL EXPERIENCE

Penetration Testing Labs (HTB / Proving Grounds / PEN-200)

Completed 50+ machines in lab environments simulating real-world enterprise attack scenarios.

- Network and service enumeration to identify attack surfaces
- Exploitation of misconfigurations and vulnerable services
- Windows and Linux privilege escalation

- Active Directory enumeration and attack paths
- Credential attacks (password spraying, hash cracking, brute force)
- Network pivoting and lateral movement
- Documented full attack chains and findings

Active Directory Home Lab

Built and maintained a personal Active Directory environment simulating an enterprise domain for penetration testing practice.

- Configured Windows Server domain controller and client machines
- Simulated common enterprise misconfigurations and vulnerabilities
- Performed AD enumeration (SMB, LDAP, Kerberos)
- Practised credential attacks and full domain compromise simulations

PROFESSIONAL EXPERIENCE

Pharmacy Dispenser – Locum Prime (2018-Present)

- Work in regulated environment requiring accuracy and confidentiality
- Handle sensitive data under strict compliance procedures
- Communicate with healthcare professionals and patients
- Maintain accurate documentation and workflow prioritisation
- Operate effectively in fast-paced environment

EDUCATION

Bachelor's Degree in Biomedical Science – University of East London

DEVELOPMENT

- Preparing for OSCP and CSTM certification
- Hack The Box Academy (Active Directory, Web Application Security, Privilege Escalation modules)
